

TABLE OF VALUES

What traditional value theorists called a table of values is a chain like, e.g.,

Creative thinking \geq Constructive criticism \geq Destructive criticism \geq
No criticism \geq Dogmatic acceptance or rejection.

I.e., a table of values is a set of value statements of the form

$$A \geq B \wedge B \geq C \wedge \dots \wedge Y \geq Z$$

where \geq is the relation of being more valuable than or as valuable as!
